I'm using the AkoComment extension for the comments here but for some reason posting comments is not working correct.

The Securitycode seems to be incorrect with the Internet Explorer or Opera but with Firefox it works fine (strange)

If you have any idea how to solve this issue leave a comment.. I have disabled the securitcode for now, I hope this will not attract too much spam ^^

[UPDATE]

I got it working, I edited the img.php and the akocomment.php file and removed the lines with session\_register . Actually I have no idea why it has solved this problem but it works yay.
